ULTRALEVEL ANNOUNCES DISASTER RECOVERY EVENT FOR IT EXECUTIVES  
“Green Servers and SAN” event to feature end-to-end business continuity  
technology from VMware, Data Domain and Dell-EqualLogic.

Tampa, FL – UltraLevel announced the “Green Servers and SAN” Disaster Recovery event to be held Wednesday, June 25<sup>th</sup> at Maggiano’s Restaurant located at 203 West Shore Plaza. At this unique event, attendees will get the chance to learn the benefits of the latest virtualization & disaster recovery technologies available from VMware, Data Domain, and Dell EqualLogic.

UltraLevel’s data center fail-over and recovery demonstration will feature VMware’s flexible and high availability server virtualization solutions, Data Domain’s data deduplication, backup and recovery solutions and Dell-EqualLogic’s storage virtualization and replication solutions in-action. This simulated catastrophe will illustrate the seamless continuity of operations enabled by the strategic assembly and integration of cost effective, energy-efficient, multi-vendor solutions as designed and implemented by the IT virtualization specialists at UltraLevel. Attendees will see firsthand how IT services can be rapidly restored and made available to end users from a secondary, DR/BC data center when a disaster renders a primary datacenter totally inoperable.

“With the 2008 Hurricane season upon us, there has never been a better time to increase your company’s preparedness for the event of disaster. And with the virtualization and storage replication technology that’s now available, IT professionals can take steps to be prepared for any threat to business continuity. Plus, companies can achieve significant cost savings in IT operations and they can do so in an energy efficient manner – conserving resources and limiting their overall carbon footprint,” explains Michael L. Butz Sr., President of UltraLevel.

Attendees will be UltraLevel’s guests at a sit down lunch, and will receive a hardcopy of Dr Seuss’ “Green Eggs and Ham” followed by business solution-focused discussions led by UltraLevel technology advisors and vendor partner representatives.

To register for this event, visit the Event Registration page at <http://www.ultralevel.com/greenserversandsanevent> or contact David Bitel at 313.875.1111, extension 313.

**About Ultralevel**

Headquartered in Detroit, Michigan, UltraLevel, Inc. is focused on utilizing information technology to maximize its clients’ bottom line. Unlike many other IT services firms, UltraLevel’s focus extends beyond everyday network implementation and support. Our consultants are specifically trained to see each technology in the context of the overall business. This approach enables UltraLevel the ability to deliver solutions with greater tangible impact on the bottom line. Our goal is to be recognized not just as information technology experts, but as trusted business advisors for our clients.
